

CSEsolutions - Turning products into solutions

Our mission...

...is to provide state of the art software and services for the integration of web services, applications and information in a faster, better and more affordable manner to satisfy your business needs.

Is your benefit...

We can bring you the latest and most beneficial software and services to

- immediately lower your operations cost, and
- dramatically increase your productivity, and
- enhance your product or service

in gathering and integrating information for your business needs.

Your need...

...if you:

- have an ongoing need for web available information to run your business
- have to go visit numerous websites to get the information required to make a purchase or decision
- need to perform on a limited budget

You need the advantage of CSEsolutions and RoboSuite

...Could your business benefit by providing customers or potential customers an integrated view of information presently residing in a disparate and cluttered set of web locations?

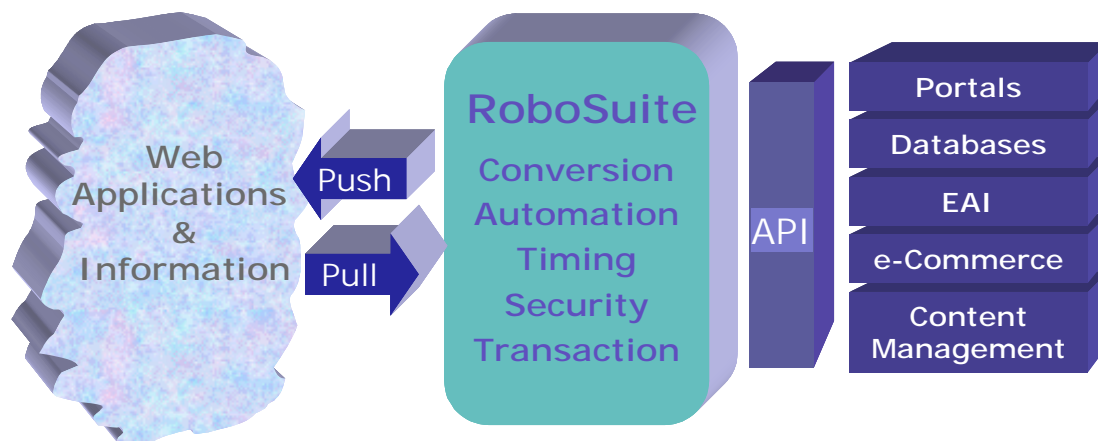

You need the advantage of CSEsolutions and RoboSuite

CSEsolutions offers:

- Rapid, Easy & Affordable Web Integration
- Increased Productivity
- Low cost of ownership

Simple and easy solutions to maintain, modify and/or scale

Our Company...

...CSEsolutions is a value added reseller offering web integration services and a powerful web integration platform called RoboSuite. CSEsolutions offers a rapid and effective means of collecting and integrating web-based information and processes critical to your business. CSEsolutions offers a tailored approach to each enterprise's needs in order to provide the most cost effective solution. Because implementation occurs rapidly, the most cost effective solution in most cases is also significantly less than alternative approaches.

CSEsolutions ability to this is based on its systematic approach to problem solving, strong technical skills and the powerful capability of the Kapow Technology RoboSuite.

RoboSuite Technology...

...is the next generation web integration software. The RoboSuite is a tool suite that since its inception in 1998 has been targeted for information and application integration. Years of research and development have led up to the recent introduction of the latest version of our web integration platform called RoboSuite.

The lowest common denominator for published information on the Internet is HTML, and the structure of HTML is very primitive. RoboSuite an intelligent platform that overcomes this obstacle and integrates and converts information and applications into more structured data forms, such as XML or relational databases through the use of advanced robot technology for integration.

The web integration platform with its cutting-edge visual development capabilities is the cornerstone of Kapow Technologies and Kapow is fully committed to further development of next generation technology for the RoboSuite platform. RoboSuite, presently in its fourth generation, is giving customers true "visual integration capability" of web applications and data.

Our Solution...

...is based on the Kapow Technologies RoboSuite, the worlds most powerful solution for doing Web Application Integration. The technology is based on three pending worldwide patents and written in **Pure Java™** for easy integration. RoboSuite facilitates an easy and highly productive environment for the creation and maintenance of robots for performing web integration in either a batch or real time mode. RoboSuite consists of five components:

ModelMaker – a visual data object modelling application.

RoboMaker – a powerful visual programming environment for creating robots with an exceptional visual debugging capability.

RoboRunner – manages and schedules batch robot execution for optimal use with distributed or multiprocessor-based environments.

RoboServer – an XML-based web service engine allowing on-demand robot execution. Using an XML based robot query language it facilitates real time transactions, data queries, etc in distributed or multiprocessor environments.

RoboManager – manages the robot life cycle, robot performance and responsibilities in order to reduce cost of administration for interfacing with hundreds or thousands of websites.
